

New School of Business and Economics

Axians Portugal signs partnership with the New School of Business and Economics

Axians Portugal has taken on the role of strategy advisor in the consortium of technology companies in the IT field of the New School of Business and Economics. The partnership now signed aims to develop the plan and study of technical feasibility of the school's ICT infrastructure, supporting the innovative vision that is intended to be implemented in the new campus of the institution.

Corresponding to the motto of Axians "the best of ICT with a human touch" this partnership reinforces the involvement of teams of strategic consultants who are already collaborating in the design of the technological platform of the new Campus in Carcavelos.

The new SBE Campus, currently under construction in the Carcavelos zone next to the São Julião da Barra fort, will be a unique campus that integrates the concept of "learning and living technology" campus technology is being designed to create the conditions necessary for an interactive lifestyle based on the new forms of collaboration that keep the whole community of students and alumni connected throughout their lives in New SBE. For Pedro Santa Clara of New SBE, "the work we have been developing in partnership with Axians Portugal is essential for the construction of a future-oriented school, integrated with the best technological solutions and with a more innovative education, capable of competing in Portugal and in the world; we seek to choose the best partners for each project that can apply their know-how to the differentiating vision that we intend to introduce in this sector. "

"As we collaborate in the development of New SBE's technological strategy, our responsibility increases, which translates into our ability to add value to our customers," said Pedro Faustino, CEO of Axians Portugal responsible for Consulting, Cybersecurity, Enterprise Datacenter and Networking. "This is mainly about recognizing the strategic role that our teams can play in our clients' projects, while at the same time reinforcing the importance of the connection between the business world and the academic world of excellence," he added.

The design of the future technological architecture of the Campus is based on the areas of big data, cloud, cybersecurity and social, having as main axis a work base with three slopes: operational evaluation of the current reality existing in the Campolide Campus; in the analysis of a potential group of users (students, teachers, staff), stimulating them to implement new behaviors and needs; and in the architecture project of the project, which is in its final phase of implementation.

At a later stage, consultative support will be provided in the technical evaluation of the solutions that best serve the needs and interests of Nova SBE. This monitoring of Axians Portugal should cover the entire cycle of digital transformation that will extend over the next three years. The project will serve a community that can reach 5,000 direct users and indirectly benefit the entire community of citizens and passers-by from the surrounding areas of the Campus, in a project of regional revitalization and national impact for the international projection that it intends to achieve as one of the Business Schools of world reference.

The project for the new campus of Nova SBE can be visited and its construction accompanied in [http // // novacampaign pt /](http://novacampaign.pt/)
